Audience Teachers

Presenter Tyler Leipprandt - Instructional Technology Consultant.

Deadline Registration deadline is December 7, 2016

WHAT IS A SPHERO?

A sphero is a robotic ball that is controlled using an IOS or Android device. With the use of multiple free apps, students of any age are able to program the sphero to do various tasks. Students can draw a figure and have the robot mimic the figure or program it to roll at a specific angle, for a specific time, or at a specific speed.

"...Sphero SPRK Edition will inspire a love of robotics, coding, and STEM principles...all through play. Fire up your imagination and break the rules of learning." - Macworld
